

Lab 10/11/20 p. 1

Figure 1.10 Polymers among E. coli & C.
- isolated from sewage.

1. Greater similarity of *E. coli* among
2nd culture? The range of *E. coli* is
diverse and distinct "distinct families"
2. Is culture of *E. coli*?
3. Is culture of *E. coli*?

Genetic
Metabolic
Phylogenetic
and other

Figure 1.11 Family of *E. coli*
in E. coli (Genotype of *E. coli*)

1. Isolate from: is it the same as the
of *E. coli* in respect, between, respectively, etc.

2. Isolate from: is it the same as the
of *E. coli* in respect, between, respectively, etc.

3. Isolate from: is it the same as the
of *E. coli* in respect, between, respectively, etc.

The above classification is based on the following characters:
 1. The nature of the teeth.
 2. The structure of the skull.
 3. The nature of the limbs.

The above classification is based on the following characters:
 (a) The nature of the teeth.
 (b) The structure of the skull.

The above classification is based on the following characters:
 (a) The nature of the teeth.
 (b) The structure of the skull.

The above classification is based on the following characters:
 (a) The nature of the teeth.
 (b) The structure of the skull.

The above classification is based on the following characters:
 (a) The nature of the teeth.
 (b) The structure of the skull.

Polysaccharide long Synthetic Polysaccharides are
of following structures:

1. Carbohydrates are further grouped
into:
a. Monosaccharides b. Disaccharides
c. Polysaccharides d. Oligosaccharides

1.1. Monosaccharides: simple sugars, cannot be broken into
simpler units.

Glucose Fructose

Galactose Mannose

Arabinose Ribose

Xylose Erythrose
